

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-5 (canceled)

Claim 6 (currently amended): A high-strength aluminum alloy fin material for heat exchangers having high strength and excelling in thermal conductivity, erosion resistance, sag resistance, sacrificial anode effect and self-corrosion resistance, comprising:

0.8-1.4 wt% of Si,

0.15-0.7 wt% of Fe,

1.5-3.0 wt% of Mn, and

0.5-2.5 wt% of Zn,

further having Mg as an impurity limited to 0.05 wt% or less and the remainder comprising impurities and Al; and wherein said aluminum alloy fin material

having has a tensile strength before brazing of at most 240 MPa ~~or less~~;

a tensile strength after brazing of 150 MPa or more; and

a recrystallized grain size after brazing of 500  $\mu\text{m}$  or more.

Claims 7-9 (canceled):

Claim 10 (new): The high-strength aluminum alloy fin material according to claim 6, wherein Si is present in an amount of from 0.9 to 1.4 wt%.

Claim 11 (new): The high-strength aluminum alloy fin material according to claim 6, wherein Fe is present in an amount of from 0.17 to 0.6 wt%.

Claim 12 (new): The high-strength aluminum alloy fin material according to claim 6, wherein Mn is present in an amount of from 1.8 to 3.0 wt%.

Claim 13 (new): The high-strength aluminum alloy fin material according to claim 6, wherein Zn is present in an amount of from 1.0 to 1.5 wt%.

Claim 14 (new): The high-strength aluminum alloy fin material according to claim 6, comprising:

0.9-1.4 wt% of Si,

0.17-0.6 wt% of Fe,

1.8-3.0 wt% of Mn, and

1.0-1.5 wt% of Zn,

further having Mg as an impurity limited to 0.05 wt% or less and the remainder comprising impurities and Al; wherein said aluminum alloy fin material

has a tensile strength before brazing of at most 240 MPa;

a tensile strength after brazing of 150 MPa or more; and

a recrystallized grain size after brazing of 500  $\mu\text{m}$  or more.

Claim 15 (new): The high-strength aluminum alloy fin material according to claim 6, wherein the tensile strength before brazing is from 220-220 MPa.

Claim 16 (new): The high-strength aluminum alloy fin material according to claim 6, wherein the tensile strength after brazing is from 150-166 MPa.

Claim 17 (new): The high-strength aluminum alloy fin material according to claim 6, exhibiting a corrosion current density of from 0.6 to 0.9  $\mu\text{A}/\text{cm}^2$ .

Claim 18 (new): The high-strength aluminum alloy fin material according to claim 6, exhibiting a sag of from 12.4 to 18.0 mm.

Claim 19 (new): The high-strength aluminum alloy fin material according to claim 6, wherein the impurities comprise Cu, Cr, Zr, Ti, and V.

Claim 20 (new): The high-strength aluminum alloy fin material according to claim 19, wherein Cu is present in an amount of at most 0.2 wt%.

Claim 21 (new): The high-strength aluminum alloy fin material according to claim 19, wherein Cr, Zr, Ti and V are present in an amount of at most 0.20 wt%.
